

PRIYANSHU KUMAR

Full Stack Engineer | Java, Spring Boot, React, Next.js, PostgreSQL

Lucknow, India (Open to Noida / Remote) | +91 60069 35523 | priyanshu.dev.agile@gmail.com

linkedin.com/in/priyanshukumar1265 | github.com/PriYanahsu | devpriyanshu.vercel.app

Summary

Full Stack Engineer with 1+ year of experience (including internship) shipping production products with Java, Spring Boot, FastAPI, React, Next.js, TypeScript, and PostgreSQL. Built multi-tenant platforms with role-based access control, 40+ REST APIs, and LLM integrations (Gemini, OpenAI) with structured outputs and prompt-injection safeguards.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, SQL

Backend: Spring Boot, Spring Security, JPA/Hibernate, FastAPI, REST APIs, JWT Authentication, RBAC, OpenAPI

Frontend: React, Next.js (App Router), TanStack Query, Zustand, React Hook Form, Zod, Tailwind CSS, shadcn/ui, Vite

Databases: PostgreSQL, MySQL, Redis, Flyway, Supabase, pgvector

DevOps & Testing: Docker, GitHub Actions, AWS (EC2, RDS), Vercel, Render, Git, JUnit 5, Mockito, Jest, Playwright

AI & LLM: Gemini API, OpenAI API, Structured Outputs, RAG, Prompt Engineering, Claude Code, Cursor

Experience

Associate Software Engineer | Cognivac, Lucknow, India

Dec 2025 -- Present

- Docqfy (Property Audit Platform):** Built a multi-tenant SaaS platform with Next.js, FastAPI, and PostgreSQL featuring 3 role-based portals (Admin, PM Company, Tenant) across 20+ screens; designed 40+ REST APIs with JWT authentication and row-level ownership checks on a normalized 15+ table schema.
- Clinic Appointment System:** Built the Spring Boot backend and Next.js frontend for doctor slot scheduling, patient self-booking with conflict detection, automated reminders across 3 channels, and an admin analytics dashboard for booking trends and no-show patterns.
- Upwork Job Tracker:** Built a JavaScript browser extension with a FastAPI backend that auto-captures job details on proposal submission and tracks every application across 5 statuses in one dashboard.
- Reddit Devvit Games:** Shipped 4 word games (Wordabble, Looonguess, WordClash, Word Search) with 50+ levels, a player level creator via the Reddit API, and Redis-backed level data and user progress.

Frontend Engineer Intern | Cognivac, Lucknow, India

Jul 2025 -- Dec 2025

- Built responsive pages and reusable UI components with React, Next.js (App Router), and Tailwind CSS for production client products.
- Integrated REST APIs with loading and error states, form validation, and protected routes; worked in Agile sprints with pull requests and code reviews.

Projects

FoodCal -- AI Nutrition & Fitness Coach | Live | Frontend | Backend

Jan 2026 -- Present

Next.js, TypeScript, TanStack Query, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, Flyway, Gemini API, Docker

- AI photo-to-meal logging:** Built a pipeline where Gemini returns per-ingredient nutrition under a strict JSON schema; the API re-sums components, validates the 4/4/9 kcal-per-gram macro identity, rejects low-confidence results, and fails over across models on quota errors.
- Deterministic plan engine:** Implemented calorie targets in code (Mifflin-St Jeor BMR/TDEE, capped weekly change, calorie floors) so the LLM only explains targets and can never set them.
- Full-stack architecture:** Built the Next.js frontend with Web Push notifications on a Spring Boot API secured with Spring Security (stateless JWT access/refresh tokens, BCrypt, per-route ownership checks), with a Supabase PostgreSQL schema versioned by 14 Flyway migrations.

HireCheck -- Online Examination & Assessment Platform | Live | Frontend | Backend

Dec 2025 -- Present

React, TypeScript, TanStack Query, React Hook Form, Zod, shadcn/ui, Recharts, Spring Boot, Spring Security, PostgreSQL

- Exam builder:** Built an admin test builder supporting 4 question types (multiple choice, coding with test cases, subjective, pattern recognition), bulk JSON question import, and form validation with React Hook Form and Zod.
- Proctored test flow:** Developed enforced fullscreen mode, tab-switch detection that auto-submits on the 3rd violation, a countdown timer that auto-submits on expiry, and per-question answer saving.
- Candidates, APIs & analytics:** Implemented unique test links, public registration, and bulk candidate invites from Excel, backed by 20+ Spring Boot REST APIs with JWT and RBAC, plus automated scoring and a Recharts analytics dashboard.

Education

Master of Computer Applications (Data Science) | Babu Banarasi Das University, Lucknow

2023 -- 2025

Bachelor of Computer Applications | Shri Ramswaroop Memorial University, Lucknow

2020 -- 2023

Achievements

- 1st place**, CODE RUSH 2.0 university hackathon (2024); **450+** DSA problems solved on LeetCode and HackerRank; **5-star** HackerRank rating in Java and SQL.
